FOR IMMEDIATE RELEASE

**New Color Flash Cards Android Application Available FREE at
Google Play Store from MakeMyAndroidApp**

May 19, 2013 - MakeMyAndroidApp, an independent Android application developer, has just released a revolutionary flash card application for Android devices called [Color Flash Cards](#), which is available in the Google Play Store for free and immediate download.

A valuable tool for students, educators, and parents, the flash card application is offered free of charge to anyone with an Android device on release 2.2 or higher. The application is suitable for all audiences.

Color Flash Cards has many aesthetic and functional features that set it apart from other flash card programs. Operation is simple and intuitive, and color customization creates a personalized experience for users.

A unique feature is the ability to share card decks with other users. This can be done directly via QR code, or from a list of posted decks accessible within the application via the 'Community' button.

According to Tim, president of MakeMyAndroidApp, the real benefit is portability. "With Color Flash Cards, anyone can study any number of subjects on the go. The colors make learning fun, and are useful for classifying different decks and cards within those decks."

To download the application, visit the [MakeMyAndroidApp page](#) at the Google Play Store, or get it directly by visiting <https://play.google.com/store/apps/details?id=com.makemyandroidapp.colorflashcards>.

ABOUT MAKEMYANDROIDAPP: MakeMyAndroidApp was founded in 2008 on the principles of open source programming, knowledge sharing, and information without constraints.
